

# EXPERTS IN VOIP AND VIDEO FOR YOUR EMBEDDED SYSTEMS

Our mission is to help manufacturers, integrators, and embedded system developers leverage SIP-based open-source software to bring advanced audio and video calling capabilities to their products.

## linphone open source VOIP project

### INTEGRATE OUR PRODUCTS INTO YOUR EXISTING INFRASTRUCTURE

Our VoIP application, libraries, and servers offer built-in advanced features specifically designed for intercom solutions

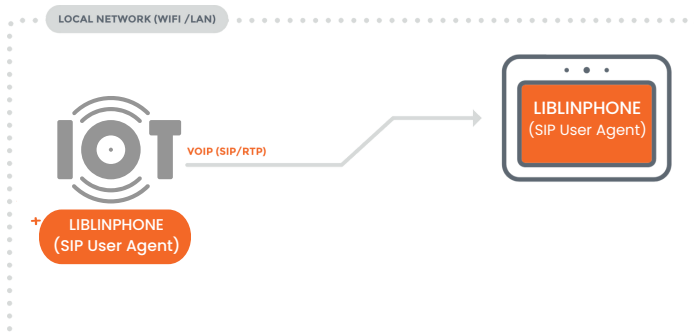

### SIMPLE SOLUTIONS FOR COMPLEX SYSTEMS

Our VoIP software solutions can be used for a wide range of embedded system use cases ranging from simple scenarios, such as peer-to-peer voice communication over a local network, to complex architectures with multiple devices located inside and outside the home network.

#### PEER-TO-PEER USE CASES

Audio/video calls are forked from the door entry device to several devices located inside of the house (via local Wi-Fi or LAN)

#### REMOTE, MULTI-TERMINAL USE CASES

Audio/video calls are relayed to the user's smartphone, even when the user is not at home (via 3G/4G)
